

# How do I configure the iPhone for my email accounts?

The following article explains how to download email from your Hosting.com account to your iPhone.

**To configure your iPhone (software version 1.x) for email, please follow these steps:**

1. From the Dashboard, click **Settings**.

2. Under **Settings**, select **Mail**.

3. Select Add Account...

4. Select **Other** as the type of account.

Enter your account information

Cancel Other Save

IMAP POP Exchange

**Name** John Appleseed

**Address** example@mac.com

**Description** My Email Account

**Incoming Mail Server**

**Host Name** mail.example.com

**User Name** Required

**Password** Required

5. Select **POP**.
6. Enter the requested information:
  - **Name:** the name of the mail user
  - **Address:** the email address of the mail user
  - **Description:** a description of the mail user
  - **Host Name:** enter the mail server mail.yourdomain.com (incoming mail server and external mail server)
  - **User Name:** enter the full email address (incoming mail server and external mail server)
  - **Password:** enter the users password (incoming mail server and external mail server)
7. Click **Save**.
8. If you see a message that says "Cannot Connect Using SSL", click **Yes** when asked to setup the account without SSL.
9. Click **Save**.
10. Click **Settings** for the account you just created.
11. Click **Advanced**.

12. Set **Incoming Uses SSL** and **Outgoing Use SSL** to **OFF**.

13. Under **Incoming settings**, click **Authentication** and select **Password**.  
14. Under **Outgoing settings**, click **Authentication** and select **Password**.
